TECHNICAL SKILLS

Programming: Python, SQL, HTML, Bash, JavaScript, Java, Object-Oriented Programming (OOP)

Technologies: Visual Studio Code, Splunk, AWS, Remedy, Git, Jenkins, Postman, Agile, Jira, Microsoft SQL Server, Putty, SecureCRT

Operating Systems: Linux, Windows

EXPERIENCE

Development Tools Software Engineer

July 2022 - Nov 2024

Intel

Remote

- Built a compiler reporting tool using Python and SQL to deliver daily automated status updates to over 30 team members, reducing the average compiler issue response time from 24 hours to 12 hours.
- Developed full stack web tools with Python, JavaScript, and the Flask framework to improve compiler testing and monitoring, while mentoring users on how to utilize the tools.
- Resolved compiler issues by reproducing build errors in containerized Kubernetes environments, identifying root causes, and collaborating with developers to implement fixes within 24 hours, reducing ongoing build errors by 86%.
- Implemented compiler configuration build changes to Shell scripts and validated changes through CI/CD processes including Jenkins and GitHub, enhancing overall compiler performance by 60%.
- Led the integration of a GCC cross-toolchain with CMake across five compilers, enabling compiler execution across diverse operating systems and platforms.

Infrastructure Automation Engineer II

Jan 2020 - June 2022

TD Ameritrade

Jersey City, NJ

- Implemented a solution to replace the manual creation of change requests by programmatically generating change requests and auto-populating specific fields through Remedy's REST API, thereby streamlining the change management process and cutting manual request creation time by 66%.
- Developed a variety of Python tools using REST APIs to retrieve data, such as JSON, with one tool specifically designed to track and report the daily number of servers that were patched.
- Provided user onboarding and technical support for infrastructure web applications including a server patching tool and a virtual application lever tool, assisting 2 teams a week on average.
- Created Splunk dashboards to provide daily metrics on the number of services with outages to upper management.

Infrastructure Engineer I

June 2018 - Dec 2019

TD Ameritrade

Jersey City, NJ

- Completed three 6-month rotations in different areas across the technology infrastructure organization including engineering, software development, and operations.
- Designed features on an online call tracking portal called Pulse, utilized by over 50 employees across the organization.
- Provided application support and monitoring via App Dynamics.

Infrastructure and Network Security Intern

June 2017 - Aug 2017

ADP

Roseland, NJ

- Generated a Python script to output IP addresses that belonged to incorrect asset groups in Qualys.
- Ensured that over 400 internet-facing applications with an SSL grade below B in the Archer database were remediated by working with application developers on solutions to address weak cipher suites, insecure signature algorithms, untrusted certificates.
- Created test files to report which ADP file extensions get blocked internally and externally, preventing malware and viruses from entering ADP's internal network.

Operations IT Engineering Intern

May 2016 - Aug 2016

ETS (Educational Testing Service)

Princeton, NJ

- Led a Jira project called "Engineering Request Tracking" to process requests from 30 engineers.
- Automated creation of Jira issues from forwarded emails via POP/IMAP mail servers, decreasing the response time of engineering requests by 75%.

EDUCATION

Bachelor of Science (B.S.) in Electrical and Computer Engineering

Rutgers University, The State University of New Jersey

May 2018

New Brunswick, NJ
